**Use a system of linear equations to solve each problem. (4pts each)**

- 10) A local band is planning to make a CD. It will cost \$12,500 to produce and record a master copy and an additional \$2.50 to make each sale copy. If they plan to sell the final product for \$7.50 how many disks must they sell to break even?

a) Write an equation for the expenses.

$$12,500 + 2.5x = \text{expenses}$$

b) Write an equation for the sales.

$$7.5x = \text{cost}$$

c) Solve the system of equations to find the number of CDs to be sold in order to break even.

$$\begin{array}{rcl} 12,500 + 2.5x & = & 7.5x \\ -2.5x & & -2.5x \\ 12,500 & = & 5x \end{array}$$

2,500 CDs need to be sold  
in order to break even (no money lost, but no profit)

- 11) Suppose you are deciding whether to buy ski equipment. Typically it costs you \$60 a day to rent ski equipment and buy a lift ticket. You can buy ski equipment for \$400. A lift ticket alone costs \$35 for one day. Find the break even point.

a) Write an equation that shows the cost of renting.

$$60d = \text{renting cost}$$

b) Write an equation that shows the cost of buying the equipment (and lift ticket)

$$400 + 35d = \text{buying cost}$$

c) Solve the system of equations.

$$\begin{array}{rcl} 60d & = & 400 + 35d \\ -35d & & -35d \end{array}$$

$$\begin{array}{r} 16 \\ 25 \sqrt{400} \end{array}$$

$$d = 16 \text{ days}$$

- 12) A garden center sells two types of lawn mowers. Total sales of mowers for the year were \$8379.70. The total number of mowers sold was 30. The small mower costs \$249.99. The large mower costs \$329.99. Find the number of each type sold.

$$8379.70 = 249.99S + 329.99L$$

$$30 = S + L$$

elimination

$$100(30 = S + L)$$

$$499.70 =$$

$$\begin{array}{rcl} 8379.70 & = & 249.99S + 329.99L \\ -499.70 & = & 249.99S + 249.99L \\ \hline 880 & = & 80L \quad |L=11| \end{array}$$

$$30 = S + 11$$
